

Buildings constructed in Structural Steel in Taipei

台北市用鋼結構建造的樓房

Raymond Wong visited Taipei to conduct his urban study of the city in mid-December 2017. As he can observe, majority of the building construction projects in whatever sizes or types, are constructed using structural steel. This is exactly different from what we do in Hong Kong. Below is his sharing of his observation.

王煒文老師2017年12月中去了台北多天，進行他對台北市的城市考察。從他所見市內主要樓房建築項目，無論類型與規模大小，大都以鋼結構施工。這與香港的方式顯著不同。以下是其所見的例案，供大家參考。
